

During discovery, you observed Robert assisting his father with basic auto maintenance tasks (changing fluids, a tire, Robert is also working towards getting his Driver's License), pulling apart old fire extinguishers with tools for scrap, and also wood chopping using a splitter and mowing the lawn. Transportation (Robert has a goal of driving) and Machinery are two emerging Vocational Themes.

You follow the themes to a local car garage where you take your car for tune ups and basic repairs. The garage has one full-time employee who works along-side the owner, Dwayne. The informational interview goes well and an extended observation uncovers a need for a tire changing machine that costs roughly \$4,000.

Robert has an open VR case, but no access to Medicaid Waiver supports. The team is concerned with transportation and follow-along supports once the VR case is closed.

Robert receives \$240/month SSDI and \$513/month SSI.

Questions:

1. What is Robert's PASS Potential (Minimum/Maximum) per year?
2. How can PASS assist in removing identified barriers?
3. Write Model PASS Plan
